

Large screens at Carnival Casino South Africa:

Large screens at Carnival Casino South Africa: Carnival City Casino in South Africa boasts one of the most impressive AV display solutions ever installed in this type of venue. All over the casino, dnp New Wide Angle and dnp Black Stripe rear projection screens are used to show entertainment such as broadcast television and feeds from a video jukebox and custom in-house promotions.

A video camera is linked directly to the transmission system, so prize winners and events in the casino can be displayed on the big screens. In the SuperSport Action Bar area, four New Wide Angle Screens above the bar are capable of showing multiple sporting events simultaneously. A fifth screen displays betting information and racing events.

The installation includes a total of 12 dnp New Wide Angle Screens powered by Barco projectors. The AV solution is supplied by the Johannesburg-based screen technology company Questek.
